1.) Type of Technology

IL9 Corporation intends to implement a network based Phase II technology by U.S. Wireless.

2.) Testing and Verification

We will plan on using the Predictive Testing Method, which is one of the suggested methods outlined in the OET Bulletin NO.71

3.) Implementation Details and Schedule

We very recently received our first requests for Phase I implementation. Our plan for implementation for Phase II will depend on the requests from the PSAPs. From discussions with the PSAP coordinators there are no immediate plans to request Phase II.

4.) PSAP interface

Many of our PSAPs have not made a decision on the their hardware or software so we do not know exactly what changes we will need to implement. We will comply with the guidelines regarding deploying Phase II to 50 percent of the callers within 6 months of the PSAP request and to 100 percent within 18 months.

5.) Existing Handsets

Not applicable

6.) Location of Non-Compatible Handsets

Not applicable

7.) Other Information

We have had no requests for Phase II implementation and do not expect any for a least a year.
